Stockroom Inventory Software for a Variety of Industries and Users

Product Features/Benefits Video Download

Stockroom Inventory Software

 **IntelliTrack Stockroom Inventory software** allows Stockroom or Facility Maintenance Managers to track consumable inventory usage and stock levels. Using a Windows CE/Mobile handheld computer with integrated barcode reader, personnel can quickly receive and issue consumable inventory. Inventory transactions on the Windows CE/Mobile handheld computer typically require scanning the Stockroom location barcode, item barcode and entering the transaction quantity. IntelliTrack Stockroom keeps detailed information about usage and manages your reorder points with minimum and maximum levels defined for each inventory item. If your inventory items do not have barcodes, IntelliTrack Stockroom Inventory can print them for you.

IntelliTrack Stockroom, a storeroom inventory software, is used to track office supplies, uniforms and maintenance items. IntelliTrack Stockroom is popular with municipalities, police, fire, EMS, building maintenance and office supply departments. Accurate inventory control is the key to controlling maintenance and supply costs.
